RE: Laboratory Results for
Project Number: 112G08982, Project Name/Desc: NASA KSC HMFN SWMU 090
ENCO Workorder(s): AE02766

Dear Chris Hook,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Thursday, April 22, 2021.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

Overview

All samples submitted were analyzed by Environmental Conservation Laboratories, Inc. in accordance with the methods referenced in the laboratory report. Any particular difficulties encountered during sample handling and processing will be discussed in the Remarks section below.

Remarks

Samples HMPN-MW0034-015.0-20210421[AE02766-27] and HMPN-MW0035-035.0-20210421[AE02766-28] were received at the laboratory but were not listed on the chain of custody. Per client request, samples were added to end of workorder.

List of instruments used:

Analytical and Preparation Method	SOP Reference Instrument
EPA 8260D / 5030B_MS	OVGCMS2, OVGCMS5

Analysis: EPA 8260D

Manual integrations were performed on samples associated with EPA 8260D. All data & explanations are included in the raw data section of the report.

Affected Samples: AA66091-CCV1, AA66113-CCV1, AA66116-CCV1, AA66133-CCV1, AA66142-CCV1, HMPN-MW0040-042.5-20210419[AE02766-01], HMPN-MW0039-035.0-20210419[AE02766-02RE1], HMPN-MW0041-035.0-20210419[AE02766-03], HMPN-MW0044-045.0-20210419[AE02766-04], HMPN-MW0030-025.0-20210419[AE02766-05RE1], HMPN-MW0031-035.0-20210419[AE02766-06], HMPN-MW0029-015.0-20210419[AE02766-07], HMPN-MW0036-015.0-20210420[AE02766-08], HMPN-MW0011-025.0-20210420[AE02766-09], HMPN-MW0009-020.0-20210420[AE02766-10RE1], HMPN-MW0033-047.5-20210420[AE02766-11], HMPN-MW0032-042.5-20210420[AE02766-12], HMPN-MW0047-025.0-20210421[AE02766-13], HMPN-MW0046-015.0-20210421[AE02766-14], HMPN-MW0038-020.0-20210421[AE02766-15], HMPN-MW0037-010.0-20210421[AE02766-16], HMPN-MW0027-042.5-20210421[AE02766-17], HMPN-MW0028-047.5-20210421[AE02766-18], HMPN-MW0004-010.0-20210421[AE02766-19], HMPN-MW0016-010.0-20210421[AE02766-20], HMPN-MW0045-030.0-20210421[AE02766-21], HMPN-MW0024-060.0-20210422[AE02766-22], HMPN-MW0002-035.0-20210422[AE02766-23], HMPN-MW0008-025.0-20210422[AE02766-24], HMPN-MW0042-042.5-20210422[AE02766-25], HMPN-MW0043-035.0-20210422[AE02766-26], HMPN-MW0034-015.0-20210421[AE02766-27], HMPN-MW0035-035.0-20210421[AE02766-28]
The associated calibration verification standard for multiple analytes exhibited high bias. Analyte(s) not detected in the sample.

Affected Samples: 1D26010-BS1, HMPN-MW0040-042.5-20210419[AE02766-01], HMPN-MW0041-035.0-20210419[AE02766-03], HMPN-MW0031-035.0-20210419[AE02766-06], HMPN-MW0036-015.0-20210420[AE02766-08], HMPN-MW0011-025.0-20210420[AE02766-09], HMPN-MW0033-047.5-20210420[AE02766-11], HMPN-MW0032-042.5-20210420[AE02766-12], HMPN-MW0047-025.0-20210421[AE02766-13], HMPN-MW0046-015.0-20210421[AE02766-14], HMPN-MW0038-020.0-20210421[AE02766-15], HMPN-MW0037-010.0-20210421[AE02766-16], HMPN-MW0016-010.0-20210421[AE02766-20], HMPN-MW0045-030.0-20210421[AE02766-21], HMPN-MW0024-060.0-20210422[AE02766-22]
The associated laboratory control sample for Freon 113 exhibited high bias. Analyte(s) not detected in the sample.

Affected Samples: HMPN-MW0040-042.5-20210419[AE02766-01], 1D26010-MS1, 1D26010-MSD1
Matrix spike recovery was outside acceptance limits for benzene and Freon 113.

Affected Samples: HMPN-MW0039-035.0-20210419[AE02766-02],
HMPN-MW0044-045.0-20210419[AE02766-04], HMPN-MW0030-025.0-20210419[AE02766-05],
HMPN-MW0031-035.0-20210419[AE02766-06], HMPN-MW0009-020.0-20210420[AE02766-10],
HMPN-MW0033-047.5-20210420[AE02766-11], HMPN-MW0032-042.5-20210420[AE02766-12],
HMPN-MW0027-042.5-20210421[AE02766-17], HMPN-MW0028-047.5-20210421[AE02766-18],
HMPN-MW0002-035.0-20210422[AE02766-23], HMPN-MW0042-042.5-20210422[AE02766-25]
Sample was analyzed at a dilution due to suspected matrix interference.

Affected Samples: HMPN-MW0039-035.0-20210419[AE02766-02],
HMPN-MW0030-025.0-20210419[AE02766-05], HMPN-MW0009-020.0-20210420[AE02766-10]
Initial analysis was over diluted. Sample was reanalyzed at a lower dilution.

Affected Samples: 1D27005-BS1, HMPN-MW0039-035.0-20210419[AE02766-02RE1],
HMPN-MW0044-045.0-20210419[AE02766-04], HMPN-MW0029-015.0-20210419[AE02766-07],
HMPN-MW0009-020.0-20210420[AE02766-10RE1], HMPN-MW0027-042.5-20210421[AE02766-17],
HMPN-MW0028-047.5-20210421[AE02766-18], HMPN-MW0004-010.0-20210421[AE02766-19],
HMPN-MW0002-035.0-20210422[AE02766-23], HMPN-MW0008-025.0-20210422[AE02766-24],
HMPN-MW0042-042.5-20210422[AE02766-25], HMPN-MW0043-035.0-20210422[AE02766-26],
HMPN-MW0034-015.0-20210421[AE02766-27], HMPN-MW0035-035.0-20210421[AE02766-28]
The associated laboratory control sample for benzene and carbon disulfide exhibited high bias. Analyte(s) not detected in the sample.

Affected Samples: HMPN-MW0041-035.0-20210419[AE02766-03]
Initial result for cis-1,2-dichloroethene was over the calibration range of the instrument. Sample was reanalyzed at a dilution.

Affected Samples: 1D28033-BS1, HMPN-MW0030-025.0-20210419[AE02766-05RE1]
The associated laboratory control sample for 1,1-dichloroethane, cyclohexane, and methyl acetate exhibited high bias. Analyte(s) not detected in the sample.

Affected Samples: HMPN-MW0030-025.0-20210419[AE02766-05RE1]
Sample reanalyzed as RE2 due to laboratory control sample outside acceptance limits for trans-1,2-dichloroethane.

Affected Samples: HMPN-MW0031-035.0-20210419[AE02766-06]
Initial result for cis-1,2-dichloroethene and trichloroethene were over the calibration range of the instrument. Sample was reanalyzed at a dilution.

Affected Samples: HMPN-MW0036-015.0-20210420[AE02766-08]
Sample was reanalyzed due to suspected carry over.

Affected Samples: HMPN-MW0037-010.0-20210421[AE02766-16]
Initial result for vinyl chloride was over the calibration range of the instrument. Sample was reanalyzed at a dilution.

Affected Samples: HMPN-MW0028-047.5-20210421[AE02766-18]
Initial result for trichloroethene was over the calibration range of the instrument. Sample was reanalyzed at a dilution.

Affected Samples: 1D27005-MS1, 1D27005-MSD1, 1D27020-MS1, 1D27020-MSD1, 1D28033-MS1, 1D28033-MSD1
Matrix spike recovery was outside acceptance limits for multiple analytes.

Affected Samples: 1D27005-MS1, 1D27005-MSD1, 1D27020-MS1, 1D27020-MSD1, 1D28033-MS1, 1D28033-MSD1
Precision between duplicate matrix spikes of the same sample was outside acceptance limits for multiple analytes.

Affected Samples: AA66091-CCV1, AA66113-CCV1
The continuing calibration verification standard exhibited low bias for 1,2-dibromo-3-chloropropane; the associated sample had ND (non-detect) results, but sensitivity was verified by analyzing a standard with a concentration equivalent to the reporting limit.

Affected Samples: AA66133-CCV1
The continuing calibration verification standard exhibited low bias for 1,2-dibromo-3-chloropropane. Reported analytes were not affected.

Affected Samples: AA66142-CCV1
The continuing calibration verification standard exhibited low bias for bromoform; the associated sample had ND (non-detect) results, but sensitivity was verified by analyzing a standard with a concentration equivalent to the reporting limit.

Affected Samples: AA65289-SCV1
Recovery for bromomethane was outside acceptance limits. Analyte was not detected in the samples.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Kaitlin Dylnicki

This report relates only to the sample as received by the laboratory, and may only be reproduced in full.

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*****	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
J-05	Result may be biased low. Associated calibration verification standard did not meet the minimum control limit.
QL-02	The associated laboratory control sample exhibited high bias; since the result is ND, there is no impact.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QM-11	Precision between duplicate matrix spikes of the same sample was outside acceptance limits.
QM-19	The spike recovery was outside acceptance limits for the MS and/or MSD.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

This report relates only to the sample as received by the laboratory, and may only be reproduced in full.

B	The analyte was detected in the associated method blank.
D	The sample was analyzed at dilution.
J	The reported result is an estimated value.
U	The analyte was analyzed for but not detected to the level shown, adjusted for actual sample preparation data and moisture content, where applicable.
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence (85% or greater confidence) to make a “tentative identification".
Q	One or more quality control criteria failed.

This is an automated notification from our laboratory information management system (LIMS), indicating the samples we have recently received and their associated analyses. Should any of the following information be in error, please contact us immediately.

Thank you for choosing Environmental Conservation Laboratories. Should any events occur that delay the processing of your samples or inhibit our ability to complete the project within the projected time frame you will be contacted.

Sincerely,

Kaitlin Dylnicki

(1) Before solvent extraction proceeds, verify that there is no residual chlorine above 0.5 mg/L. Any sample above this must be treated to remove excess chlorine before extraction, and this documented as a comment.

Manual Integration Review Form

ENVIRONMENTAL CONSERVATION LABORATORIES, INC. ☐ Cary ☐ Jacksonville ☒ Orlando

I hereby attest that the manual integrations contained in this package have been thoroughly reviewed and are in agreement with the associated hardcopy data.

The electronic files listed below have been reviewed for accuracy, completeness and comply with ENCO labs QA-11 Manual Integration Policy including:

- "Before" and "After" chromatograms are provided
- Manual integrations are indicated on expanded scale "after" chromatograms at a scale large enough to see the manual integration performed.
- Reintegration technique marked if available on the data system
- Technical justification for manual integration
- Appropriate flags indicating which analytes were manually integrated are included in the raw data
- Analyst's initials and date.

(1) Before solvent extraction proceeds, verify that there is no residual chlorine above 0.5 mg/L. Any sample above this must be treated to remove excess chlorine before extraction, and this documented as a comment.

A1B0955	Residual Chlorine Strips (Potassium Iodide S	102916
A1C1135	P&T Anti-Foam working solution	N/A

Manual Integration Review Form

ENVIRONMENTAL CONSERVATION LABORATORIES, INC. ☐ Cary ☐ Jacksonville ☒ Orlando

I hereby attest that the manual integrations contained in this package have been thoroughly reviewed and are in agreement with the associated hardcopy data.

The electronic files listed below have been reviewed for accuracy, completeness and comply with ENCO labs QA-11 Manual Integration Policy including:

- "Before" and "After" chromatograms are provided
- Manual integrations are indicated on expanded scale "after" chromatograms at a scale large enough to see the manual integration performed.
- Reintegration technique marked if available on the data system
- Technical justification for manual integration
- Appropriate flags indicating which analytes were manually integrated are included in the raw data
- Analyst's initials and date.

Instrument ID:	OVGCMS.5
Sequence/Batch ID:	ID28033 / AA66142

Manual Integration Review Form

ENVIRONMENTAL CONSERVATION LABORATORIES, INC. ☐ Cary ☐ Jacksonville ☑ Orlando

I hereby attest that the manual integrations contained in this package have been thoroughly reviewed and are in agreement with the associated hardcopy data.

The electronic files listed below have been reviewed for accuracy, completeness and comply with ENCO labs QA-11 Manual Integration Policy including:

- "Before" and "After" chromatograms are provided
- Manual integrations are indicated on expanded scale "after" chromatograms at a scale large enough to see the manual integration performed.
- Reintegration technique marked if available on the data system
- Technical justification for manual integration
- Appropriate flags indicating which analytes were manually integrated are included in the raw data
- Analyst's initials and date.

Instrument ID:	ONGCMS2
Sequence/Batch ID:	AA6S289

Manual Integration Review Form

ENVIRONMENTAL CONSERVATION LABORATORIES, INC. ☐ Cary ☐ Jacksonville ☐ Orlando

I hereby attest that the manual integrations contained in this package have been thoroughly reviewed and are in agreement with the associated hardcopy data.

The electronic files listed below have been reviewed for accuracy, completeness and comply with ENCO labs QA-11 Manual Integration Policy including:

- "Before" and "After" chromatograms are provided
- Manual integrations are indicated on expanded scale "after" chromatograms at a scale large enough to see the manual integration performed.
- Reintegration technique marked if available on the data system
- Technical justification for manual integration
- Appropriate flags indicating which analytes were manually integrated are included in the raw data
- Analyst's initials and date.

96		1,2,3-Trichlorobenzene	180	19.152	1.237	QO	2	A	B

Cal A = Average L = Linear LO = Linear w/origin Q = Quad QO = Quad w/origin
#Qual = number of qualifiers
A/H = Area or Height
ID R = R.T. B = R.T. & Q Q = Qvalue L = Largest A = All

Compound Name Duplication Report

Quant Method: C:\msdchem\1\methods\032921W.M
Number of Compounds: 96

31 Dibromofluoromethane = 32 Dibromofluoromethane
52 D8-Toluene = 53 D8-Toluene
73 Bromofluorobenzene = 74 Bromofluorobenzene

3 Duplicate Names Detected!!!

I Lori S. Mangrum, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (407) 826-5314 if there are any questions or problems with the enclosed electronic deliverables.

RE: Laboratory Results for
Project Number: 112G08982, Project Name/Desc: NASA KSC HMFN
ENCO Workorder(s): AE05878

Dear Chris Hook,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Thursday, July 22, 2021.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

Overview

All samples submitted were analyzed by Environmental Conservation Laboratories, Inc. in accordance with the methods referenced in the laboratory report. Any particular difficulties encountered during sample handling and processing will be discussed in the Remarks section below.

Remarks

List of instruments used:

Analytical Method / Preparation Method	SOP Reference Instrument
EPA 8260 / EPA_5030B_MS	OVGCMS5 / OVGCMS2

Analysis: 8260D

Manual integrations were performed on samples associated with EPA 8260D. All data & explanations are included in the raw data section of the report

Affected Samples: HMPN-MW0037-010.0-20210720 [AE05878-01],
HMPN-MW0038-020.0-20210720 [AE05878-02], HMPN-MW0046-015.0-20210720 [AE05878-03],
HMPN-MW0039-035.0-20210720 [AE05878-05], HMPN-MW0040-042.5-20210720 [AE05878-06],
HMPN-MW0027-042.5-20210720 [AE05878-07], HMPN-MW0028-047.5-20210720 [AE05878-08],
HMPN-MW0045-030.0-20210721 [AE05878-09], HMPN-MW0036-015.0-20210721 [AE05878-10],
HMPN-MW0041-035.0-20210721 [AE05878-11], HMPN-MW0042-042.5-20210721 [AE05878-12],
HMPN-MW0043-035.0-20210721 [AE05878-13], HMPN-MW0011-025.0-20210721 [AE05878-15],
HMPN-MW0009-010.8-20210721 [AE05878-16], HMPN-MW0034-015.0-20210721 [AE05878-17],
HMPN-MW0035-035.0-20210721 [AE05878-18], AA67497-CCV1
The associated calibration verification standard for 1,2-dibromo-3-chloropropane, bromomethane, chloromethane, and dichlorodifluoromethane exhibited high bias. Analytes not detected in the sample.

Affected Samples: HMPN-MW0047-025.0-20210720 [AE05878-04],
HMPN-MW0039-035.0-20210720 [AE05878-05], HMPN-MW0027-042.5-20210720 [AE05878-07],
HMPN-MW0028-047.5-20210720 [AE05878-08], HMPN-MW0042-042.5-20210721 [AE05878-12],
HMPN-MW0044-042.5-20210721 [AE05878-14], HMPN-MW0044-042.5-20210721 [AE05878-14RE1],
HMPN-MW0016-010.0-20210722 [AE05878-19], HMPN-MW0031-035.0-20210722 [AE05878-22],
HMPN-MW0032-042.5-20210722 [AE05878-23], HMPN-MW0033-047.5-20210722 [AE05878-24],
HMPN-MW0002-035.0-20210722 [AE05878-27], HMPN-MW0002-035.0-20210722 [AE05878-27RE1]
Sample was analyzed at a dilution due to suspected matrix interference.

Affected Samples: HMPN-MW0047-025.0-20210720 [AE05878-04],
HMPN-MW0044-042.5-20210721 [AE05878-14], HMPN-MW0016-010.0-20210722 [AE05878-19],
HMPN-MW0032-042.5-20210722 [AE05878-23], HMPN-MW0002-035.0-20210722 [AE05878-27]
Initial analysis was over diluted. Sample was reanalyzed at a lower dilution.

Affected Samples: HMPN-MW0047-025.0-20210720 [AE05878-04RE1], HMPN-MW0044-042.5-20210721 [AE05878-14RE1], HMPN-MW0016-010.0-20210722 [AE05878-19RE1], HMPN-MW0029-015.0-20210722 [AE05878-20], HMPN-MW0030-025.0-20210722 [AE05878-21], HMPN-MW0031-035.0-20210722 [AE05878-22], HMPN-MW0032-042.5-20210722 [AE05878-23RE1], HMPN-MW0033-047.5-20210722 [AE05878-24], HMPN-MW0008-025.0-20210722 [AE05878-25], HMPN-MW0024-060.0-20210722 [AE05878-26], HMPN-MW0002-035.0-20210722 [AE05878-27RE1], HMPN-MW0004-010.0-20210722 [AE05878-28], AA67520-CCV1, AA67540-CCV1
The associated calibration verification standard for bromomethane and dichlorodifluoromethane exhibited high bias. Analytes not detected in the sample.

Affected Samples: HMPN-MW0042-042.5-20210721 [AE05878-12]
Result for cis-1,2-dichloroethene was above the calibration range of the instrument. Sample was reanalyzed at a dilution.

Affected Samples: 1G27016-MSD1
Precision between the duplicate matrix spikes of the sample was outside acceptance for 1,2,4-Trichlorobenzene.

Affected Batch: 1G28012
Due to autosampler error, the matrix spike duplicate was not analyzed. Batch reported with laboratory control sample and matrix spike.

Affected Samples: AA67497-CCV1, AA67540-CCV1
The continuing calibration verification standard exhibited low bias for chloroethane; the associated sample had ND (non-detect) results, but sensitivity was verified by analyzing a standard with a concentration equivalent to the reporting limit.

Affected Samples: AA67513-CCV1
The associated calibration verification standard for 1,2-dibromo-3-chloropropane, bromomethane, chloroethane, and dichlorodifluoromethane was outside acceptance limits. Reported analytes not affected.

Affected Sequence: AA66932
SCV recovery for dichlorodifluoromethane was outside acceptance limits. Analyte was not detected in the samples.

Affected Sequence: AA67203
SCV recovery for bromomethane was outside acceptance limits. Analyte was not detected in the samples.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy package and in computer-readable data submitted on diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signatures.

Kaitlin Dylnicki
Project Manager

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*****	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
J-05	Result may be biased low. Associated calibration verification standard did not meet the minimum control limit.
QM-11	Precision between duplicate matrix spikes of the same sample was outside acceptance limits.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

This report relates only to the sample as received by the laboratory, and may only be reproduced in full.

B	The analyte was detected in the associated method blank.
D	The sample was analyzed at dilution.
J	The reported result is an estimated value.
U	The analyte was analyzed for but not detected to the level shown, adjusted for actual sample preparation data and moisture content, where applicable.
E	The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence (85% or greater confidence) to make a “tentative identification".
Q	One or more quality control criteria failed.

Reference : **Sample Receipt Confirmation - *Please Review***
Project Name / Number : NASA KSC HMFN / 112G08982
Purchase Order # : 1170718

Lab Reference # : AE05878 Lab Receipt Date: 22-Jul-21 15:15
Anticipated ***(Estimated)*** Completion Date: 29-Jul-21 19:00

This is an automated notification from our laboratory information management system (LIMS), indicating the samples we have recently received and their associated analyses. Should any of the following information be in error, please contact us immediately.

Thank you for choosing Environmental Conservation Laboratories. Should any events occur that delay the processing of your samples or inhibit our ability to complete the project within the projected time frame you will be contacted.

Sincerely,

Kaitlin Dylnicki

(1) Before solvent extraction proceeds, verify that there is no residual chlorine above 0.5 mg/L. Any sample above this must be treated to remove excess chlorine before extraction, and this documented as a comment.

Instrument 5
EST Centurian autosampler manufacturer reccommends adding 5 uL of IS/SS.

(1) Before solvent extraction proceeds, verify that there is no residual chlorine above 0.5 mg/L. Any sample above this must be treated to remove excess chlorine before extraction, and this documented as a comment.

Instrument 5
EST Centurian autosampler manufacturer reccommends adding 5 uL of IS/SS.

(1) Before solvent extraction proceeds, verify that there is no residual chlorine above 0.5 mg/L. Any sample above this must be treated to remove excess chlorine before extraction, and this documented as a comment.

Instrument 5

EST Centurian autosampler manufacturer reccommends adding 5 uL of IS/SS.

Manual Integration Review Form

ENVIRONMENTAL CONSERVATION LABORATORIES, INC. ☐ Cary ☐ Jacksonville ☒ Orlando

I hereby attest that the manual integrations contained in this package have been thoroughly reviewed and are in agreement with the associated hardcopy data.

The electronic files listed below have been reviewed for accuracy, completeness and comply with ENCO labs QA-11 Manual Integration Policy including:

- "Before" and "After" chromatograms are provided
- Manual integrations are indicated on expanded scale "after" chromatograms at a scale large enough to see the manual integration performed.
- Reintegration technique marked if available on the data system
- Technical justification for manual integration
- Appropriate flags indicating which analytes were manually integrated are included in the raw data
- Analyst's initials and date.

Manual Integration Review Form

ENVIRONMENTAL CONSERVATION LABORATORIES, INC. ☐ Cary ☐ Jacksonville ☑ Orlando

I hereby attest that the manual integrations contained in this package have been thoroughly reviewed and are in agreement with the associated hardcopy data.

The electronic files listed below have been reviewed for accuracy, completeness and comply with ENCO labs QA-11 Manual Integration Policy including:

- "Before" and "After" chromatograms are provided
- Manual integrations are indicated on expanded scale "after" chromatograms at a scale large enough to see the manual integration performed.
- Reintegration technique marked if available on the data system
- Technical justification for manual integration
- Appropriate flags indicating which analytes were manually integrated are included in the raw data
- Analyst's initials and date.

Instrument ID:	OVGCMS2
Sequence/Batch ID:	AA67203

I Lori S. Mangrum, as the designated Quality Assurance Officer, hereby attest that all electronic deliverables have been thoroughly reviewed and are in agreement with the associated hardcopy data. The enclosed electronic files have been reviewed for accuracy (including significant figures), completeness and format. The laboratory will be responsible for any labor time necessary to correct enclosed electronic deliverables that have been found to be in error. I can be reached at (407) 826-5314 if there are any questions or problems with the enclosed electronic deliverables.

RE: Laboratory Results for
Project Number: 112G08982, Project Name/Desc: NASA KSC HMFN
ENCO Workorder(s): AE06648

Dear Chris Hook,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Friday, August 13, 2021.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative if applicable. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

Kaitlin Dylnicki

Project Manager

This report relates only to the sample as received by the laboratory, and may only be reproduced in full.

FLAGS/NOTES AND DEFINITIONS

PQL	PQL: Practical Quantitation Limit. The PQL presented is the laboratory MRL.
B	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
I	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
J	Estimated value.
K	Off-scale low; Actual value is known to be less than the value given.
L	Off-scale high; Actual value is known to be greater than value given.
M	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
N	Presumptive evidence of presence of material.
O	Sampled, but analysis lost or not performed.
Q	Sample exceeded the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
Z	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
?	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
[CALC]	Calculated analyte - MDL/MRL reported to the highest reporting limit of the component analyses.
QL-02	The associated laboratory control sample exhibited high bias; since the result is ND, there is no impact.
QM-11	Precision between duplicate matrix spikes of the same sample was outside acceptance limits.
QM-19	The spike recovery was outside acceptance limits for the MS and/or MSD.
QV-01	The associated continuing calibration verification standard exhibited high bias; since the result is ND, there is no impact.

This report relates only to the sample as received by the laboratory, and may only be reproduced in full.

APPENDIX H

KSCRT MEETING MINUTES

Meeting Minutes Summary Report

Meeting Start Date:	Meeting ID:	Minute ID:	Presenter:	PRL / SWMU:
02/06/2014	170	8	Soistman, Catherine A.	HYPERGOL MODULE PROCESSING NORTH (SWMU 090)

Topic:

HMF North (SWMU 090)

Discussion:

The objective of the pilot test was to evaluate the effectiveness of air sparging by confirming the presence and properties of apparent reduced permeability soils through visual and geotechnical evaluation. The process began with the caveat that if the initial visual observations and/or geotechnical testing indicate that air sparging is not appropriate, the NASA RPM and Team will be consulted regarding a recommendation to proceed or discontinue implementation of the pilot testing. If the pilot test continued, the next step would be to evaluate effectiveness of distributing air to the sub-surface. By the pilot test, data would be obtained to support a full-scale air sparge system design, if applicable.

Geotechnical Sampling: Collected a soil core to 55 ft BLS and documented lithology, which was used to select depths for geotechnical sample collection. A geotechnical sample was collected at selected depths at an adjacent borehole. Lower permeability layers were noted at the following depths: 32.9 to 33.2, 34.0 to 34.3, 45 to 46 ft BLS and beyond. The 34 to 35 ft BLS interval contains 0.3 ft of lower permeability soil. The 39 to 40 ft BLS interval had slightly higher permeability soil. The 45 to 46 ft BLS interval had lower permeability soil. The following analyses were conducted on the samples: grain size analysis with hydrometer, moisture content, engineering classification, Atterberg limits, and a rigid wall permeability test. A flexible wall permeability test was also performed on the 45 to 46 ft BLS interval, since a flexible wall permeability test is more appropriate for clayey soils.

The 34 to 35 ft BLS interval had an engineering classification of: Sand, clayey with 33.4% fines. The 39 to 40 ft BLS interval had an engineering classification of: Sand, clayey with 40.0% fines. The 45 to 46 ft BLS interval had an engineering classification of: Clay with sand with 70.0% fines.

The rigid wall permeability tests indicated that the 34 to 35 and 39 to 40 ft BLS samples had intrinsic permeabilities of 2x10-10 and 3x10-10 cm2, respectively. Per the EPA guidelines, air sparging “may be effective; needs further evaluation”. Since air sparging has successfully been implemented at nearby VPF, which has similar lithology, it is likely that air sparging would be successful through the 34 to 35 and 39 to 40 ft BLS zones. The flexible wall permeability test indicated that the 45 to 46 ft BLS sample had an intrinsic permeability of 1x10-12 cm2. Per the EPA guidelines, air sparging would result in “marginal effectiveness to ineffective”.

Based on the evaluation of the geotechnical results, it is not likely that we could successfully move air through the deeper portion of the aquifer (>45 ft BLS), while depths above 45 ft BLS can likely be successfully sparged.

Options for path forward:
(1) Implement AS/SVE with AS screens set at approximately 45 ft BLS, followed by another technology to address remaining mass from 45 to 50 ft BLS. Concerns with implementing this technology include:
• Uncertainty in amount of mass that will be remaining in clayey layer after AS/SVE is complete,
• Uncertainty in effectiveness of technologies to remediate just clayey layer, i.e. EZVI, bio, ERH.
• Uncertainty if combined cost of AS/SVE and another technology would exceed cost of single technology.

(2) Eliminate AS/SVE as a remedy and revisit Step 2 recommendations. This will allow team to consider aggressive technologies, such as LDA, that would not be feasible if only remediating clayey layer. The facility is scheduled to be demolished this fiscal year (2014), allowing for flexibility in remediation technologies.

Team consensus reached to eliminate AS/SVE as a remedy.

Team consensus reached to revisit Step 2 EE remaining technologies (LDA Steam/ZVI, LDA Clay/ZVI, and ERH).

Team consensus reached to perform sampling at 8 wells for analysis of 1,4-dioxane and collect a sample at deep well MW0003 for analysis of VOCs.

Team consensus reached to perform interim groundwater monitoring for VOC analysis.

Goal:

Present geotechnical results and obtain team consensus on path forward.

Decision:22	Team consensus reached to eliminate AS/SVE as a remedy.
Decision:23	Team consensus reached to revisit Step 2 EE remaining technologies (LDA Steam/ZVI, LDA Clay/ZVI, and ERH).
Decision:24	Team consensus reached to perform sampling at 8 wells for analysis of 1,4-dioxane and collect a sample at deep well MW0003 for analysis of VOCs.
Decision:25	Team consensus reached to perform interim groundwater monitoring for VOC analysis.

Meeting Minutes Summary Report

Meeting Start Date:	Meeting ID:	Minute ID:	Presenter:	PRL / SWMU:
01/15/2015	176	7	Daprato, Rebecca C.	HYPERGOL MODULE PROCESSING NORTH (SWMU 090)

Topic:

Hypergol Maintenance Facility North (SWMU 090)

Discussion:

Hypergol Module Processing – North Building (M7-961) was demolished in Sept 2014. High pressure N2 line is present, but abandoned in place (above ground portion has been removed). Sewer line is present, but abandoned in place. Steam lines have been removed. Lithologic investigations revealed intervals of fine-grained and silty sands (33 to 71% fines) with some fragmented shells. There are multiple intervals with lower conductivity based on HPT data and geotechnical sampling. These intervals should be given significant considerations when investigating dissolved mass as there is a greater potential for back diffusion than a higher conductivity unit.

Hot Spot 2 is the defined as the area with trichloroethene impacts above 3,000 µg/L in the former building footprint area. Source zone is trichloroethene greater than 11,000 µg/L.

Site-wide monitoring well sampling (9 wells) for 1,4-dioxane and VOCs was conducted in October 2014. DPT groundwater sampling for VOCs in Hot Spot 2 was conducted in September and October 2014. No significant changes in VOC concentrations measured at 8 of 9 monitoring wells sampled. One change: no CVOC exceedances at HMPN-MW0014 (decrease from historic vinyl chloride exceedance). Sampling results indicated that locations with elevated 1,4-dioxane detection limits previously currently have concentrations less than GCTLs (HMPN-MW0001, and MW0002). Samples collected from monitoring wells MW0008 and MW00011 have 1,4-dioxane GCTL exceedances and samples collected from monitoring well MW0006 has NADC exceedances.

DPT sampling locations generally followed the EE Step process suggestions. Deviations from these guidelines occurred in the eastern portion of the site due to the presence of a swale and utilities. DPT samples were not collected directly beneath the source zone to prevent drag down and creating a conduit for DNAPL migration. Deep samples (beneath depth of source zone) were collected immediately N, S, E, W and generally down gradient of source zone. In Hot Spot 2, CVOC NADC impacts were detected from 16 to 55 ft bls. Source Zone (trichloroethene > 11,000 µg/L) impacts from 31 to 55 ft bls. Maximum contaminant of concern concentrations measured between 31 to 50 ft bls. DNAPL free product collected in sample from DPT1210 (51 to 55 ft bls) and DPT1211 (46 to 50 ft bls). DNAPL sample sent to fixed based lab to evaluate composition. Sample from 46 to 50 ft bls had 87,800,000 µg/L of trichloroethene and 1,070,000,000 µg/L of Freon 113. Sample from 51 to 55 ft bls had 22,100,000 µg/L of trichloroethene and 811,000,000 µg/L of Freon 113. Mobile lab identified another contaminant of concern, likely freon during sampling. Groundwater sample from DPT1226 (41 to 45 ft bls) analyzed via fixed based lab to evaluate possible presence of other contaminants of concern. Mobile lab identified another contaminant of concern and 1,2-dichlorotrifluoroethane (CFC 123a) was detected (137,000 µg/L). There is no GCTL established for CFC 123a.

Team consensus reached on horizontal and vertical delineation of trichloroethene in Hot Spot 2 for the following contours: 3 µg/L, 300 µg/L, 3,000 µg/L, and 30,000 µg/L.

Team consensus reached on horizontal and vertical delineation of Freon 113 in Hot Spot 2 for the 210,000 µg/L contour.

Team consensus reached on horizontal and vertical delineation of cis-1,2-dichloroethene in Hot Spot 2 for the following contours: 70 µg/L, 700 µg/L, and 7,000 µg/L.

Team consensus reached on horizontal and vertical delineation of vinyl chloride in Hot Spot 2 for the following contours: 1 µg/L, 100 µg/L, 1,000 µg/L.

The overall Hot Spot 1 areas plumes were updated following 2014 sampling (east side of plume) – no major changes to area:
- 3,000 µg/L trichloroethene: 0.250 acres (2012 area) to 0.258 acres (2014 area)
- 11,000 µg/L trichloroethene: 0.160 acres (2012 area) to 0.163 acres (2014 area)
- 30,000 µg/L trichloroethene: 0.130 acres (2012 area) to 0.128 acres (2014 area)

The overall CVOC plumes for LCP and HCP were updated following 2014 sampling:
- LCP: 3.02 acres (2012 area) to 3.04 acres (2014 area)
- HCP: 1.59 acres (2012 area) to 1.64 acres (2014 area)

Goal:

Obtain team consensus on Step 1A EE for Hot Spot 2.

Decision:33	Team consensus reached on horizontal and vertical delineation of Freon 113 in Hot Spot 2 for the 210,000 µg/L contour.
Decision:35	Team consensus reached on horizontal and vertical delineation of vinyl chloride in Hot Spot 2 for the following contours: 1 µg/L, 100 µg/L, 1,000 µg/L.

Decision:32	Team consensus reached on horizontal and vertical delineation of trichloroethene in Hot Spot 2 for the following contours: 3 µg/L, 300 µg/L, 3,000 µg/L, and 30,000 µg/L.
Decision:34	Team consensus reached on horizontal and vertical delineation of cis-1,2-dichloroethene in Hot Spot 2 for the following contours: 70 µg/L, 700 µg/L, and 7,000 µg/L.

Meeting Start Date:	Meeting ID:	Minute ID:	Presenter:	PRL / SWMU:
01/15/2015	176	8	Daprato, Rebecca C.	HYPERGOL MODULE PROCESSING NORTH (SWMU 090)

Topic:

Hypergol Maintenance Facility North (SWMU 090)

Discussion:

The Hot Spot 1 area is defined as the area with trichloroethene impacts greater than 3,000 µg/L around swale on west side of former building with the Source Zone defined as the area with trichloroethene greater than 11,000 µg/L (~1% solubility). The Hot spot 2 area is defined as the area with trichloroethene impacts greater than 3,000 µg/L (10XNADC) in former building footprint with the Source Zone defined as the area with trichloroethene greater than 11,000 µg/L (~1% solubility). Areas to be evaluated within the Step 2 EE: Include areas from Hot Spot 1 and Hot Spot 2, trichloroethene greater than 300 µg/L (NADC) and trichloroethene greater than 3,000 µg/L (10XNADC). The proposed remediation depth is 50 ft BLS in Hot Spot 1 and 60 ft BLS in Hot Spot 2. Geotechnical test results indicate that air sparging may be effective above 45 ft BLS, but further evaluation needed. Oxidant Demand (Mod48) results were highly variable. Biotreatability study indicated that reductive dechlorination stalls at cis-1,2-dichloroethene in source zone (MW0002), likely due to Freon 113 [complete reduction to ethene observed in HCP (MW0009)]. Bioremediation Pilot Test generally successful as it reduced up to 91% of cis-1,2-dichloroethene mass in depth interval of interest. Slow dechlorination rates likely due to low pH. EZVI bench scale study indicated significant trichloroethene reductions (>88%). The EZVI bench scale study was conducted with source area material (MW0002, 30 to 40 ft BLS) and there was no notable difference if augmented with KB-1.

Suggestion was made to do a literature search to determine whether or not air sparging and ERH technologies have been coupled.

Team consensus reached to evaluate the following technologies in a combined Step 2 EE for Hot Spot 1 and 2 within the TCE greater than 300 µg/L and TCE greater than 3,000 µg/L areas:
• LDA mixing (steam/ZVI),
• thermal (electrical and fuel-based heating systems),
• thermal for deeper depths and air sparging for shallow depths, and
• thermal for deeper depths and EZVI for shallow depths.

Goal:

Obtain team consensus on Step 1B EE for Hot Spot 1 and 2.

Decision:36	Hypergol Maintenance Facility North (SWMU 090) - Team consensus reached to evaluate the following technologies in a combined Step 2 EE for Hot Spot 1 and 2 within the TCE greater than 300 µg/L and TCE greater than 3,000 µg/L areas: • LDA mixing (steam/ZVI), • thermal (electrical and fuel-based heating systems), • thermal for deeper depths and air sparging for shallow depths, and • thermal for deeper depths and EZVI for shallow depths.

Meeting Minutes Summary Report

Meeting Start Date:	Meeting ID:	Minute ID:	Presenter:	PRL / SWMU:
09/01/2016	186	7	Soistman, Catherine A.	HYPERGOL MODULE PROCESSING NORTH (SWMU 090)

Topic:

Hypergol Maintenance Facility (HMF) North (HMFN) (SWMU 090)

Discussion:

Hot Spot 1 is defined as TCE greater than 3,000 µg/L in the area of the swale southwest of the former building. Hot Spot 2 is defined as TCE greater than 3,000 µg/L in footprint of the former building. The HCP is defined as CVOC concentrations greater than the NADCs.

LCP and Hot Spot 1 Step 1A EE and Hot Spot 1 Step 1B EE presented in 2012. The Step 1A EE provided delineation of the TCE, cDCE, and VC to GCTLs (LCP) and delineation of Hot Spot 1 (TCE greater than 3, 000 µg/L). Consensus was reached at that time that CVOC concentrations below 55 ft BLS in Hot Spot 1 are likely drag down.

Hot Spot 1 Step 2 EE was presented in 2013. This Step 2 evaluated LDA with steam/ZVI and clay/ZVI, excavation using LDA and caissons, ERH, air sparging with soil vapor extraction (AS/SVE), and EZVI. Path forward from this presentation was to perform geotechnical analysis of site soil to evaluate permeability (evaluate if air sparging can be successfully implemented).

Results of the geotechnical evaluation were presented in 2014 indicating permeability is too low for air sparge at depths greater than 45 ft BLS. Visual observations of soil cores suggest air sparge not likely to be successful greater than 45 ft BLS. Path forward was to revisit the Step 2 EE. During 2014 the Hypergol Module Processing North (HMPN) building was demolished and additional assessment was performed under the former building footprint.

In 2015 the Hot Spot 2 Step 1A EE was presented which provided delineation of Hot Spot 2 as follows:
• TCE GCTL, NADC, 10XNADC, 100XNADC
• cDCE and VC GCTL, NADC, 10XNADC
• Freon 113 GCTL
Hot Spot 1 and Hot Spot 2 Step 1B EE was presented in 2015. The Step 2 EE for Hot Spot 1 and 2 was prepared in 2015. It included an evaluation of LDA with steam and EZVI, ERH, and a combination of ERH with EZVI and ERH with AS/SVE. The Step 2 EE was reviewed by NASA and the A&Es but not presented. A decision was made to revise the Step 2 EE and evaluate less aggressive technologies and/or combined technologies.

Lithologic investigations revealed intervals of fine-grained and silty sands (33 to 71% fines) with some fragmented shells. There are multiple intervals with lower conductivity. Based on HPT, intervals of lower conductivity are located at approximately 6 to 10 and 45 to 50 ft BLS. Based on geotechnical sampling, there are intervals with lower conductivity greater than 45 ft BLS (silt/clay with sand) and clayey sand was identified at 34 to 35 and 39 to 40 ft BLS. There is a greater potential for back diffusion from lower permeability layers.

Recent sampling activities include monitoring well sampling in January 2016 to evaluate 1,4-dioxane and VOC concentrations. Supplemental DPT groundwater assessment to evaluate the Hot Spot 1 HCP was conducted in December 2015 and April/May 2016. Monitoring well sampling results indicate that VOC concentrations are generally consistent with historical results. Concentrations of VOCs in the deep zone were below GCTLs (with the exception of MW0003), which supports the conclusion that impacts greater than 55 ft BLS detected during DPT sampling are drag down. Of the nine wells analyzed for 1,4-dioxane, four wells had exceedances of the GCTL with concentrations that ranged from 3.4 I to 320 L (L indicates value exceeds the calibration range) µg/L.

Recent DPT sampling results delineated the Hot Spot 1 HCP. Limited data collected within the TCE 3,000 ppb plume and the LCP are generally consistent with previous data.

Team consensus reached for Hot Spot 1 that TCE 3 µg/L and 300 µg/L plumes are delineated.

Team consensus reached for Hot Spot 1 that cDCE 70 µg/L and 700 µg/L plumes are delineated.

Team consensus reached for Hot Spot 1 that VC 1 µg/L and 100 µg/L plumes are delineated.

Goal:

Present the site characterization (Step 1) EE for the HCP and LCP associated with Hot Spot 1. Obtain Team consensus on delineation of the Hot Spot 1 HCP and the Hot Spot 1 GCTL.

Decision:25	Team consensus reached for Hot Spot 1 that cDCE 70 µg/L and 700 µg/L plumes are delineated.
Decision:26	Team consensus reached for Hot Spot 1 that VC 1 µg/L and 100 µg/L plumes are delineated.
Decision:24	Team consensus reached for Hot Spot 1 that TCE 3 µg/L and 300 µg/L plumes are delineated.

Meeting Minutes Summary Report

Meeting Start Date:	Meeting ID:	Minute ID:	Presenter:	PRL / SWMU:
09/01/2016	186	8	Daprato, Rebecca C.	HYPERGOL MODULE PROCESSING NORTH (SWMU 090)

Topic:

HMFN (SWMU 090)

Discussion:

Hot Spot 1 is the area with TCE impacts above 3,000 µg/L (10XNADC) around swale on west side of former building. Hot Spot 2 is the area with TCE impacts above 3,000 µg/L (10XNADC) in former building footprint area. The HCP is the area with TCE, cDCE, or VC greater than their respective NADCs. Hot Spot 1 sampling results indicate that CVOC NADC impacts were detected from 6 to 70 ft BLS, source zone impacts (TCE greater than 11,000 µg/L) from 6 to 50 ft BLS, and maximum concentrations were measured between 31 to 50 ft BLS. Hot Spot 2 sampling results indicate that CVOC NADC impacts were detected from 16 to 55 ft BLS, source zone impacts were from 31 to 55 ft BLS, maximum COC concentrations were measured between 31 to 50 ft BLS, and DNAPL was observed in samples collected from DPT1210 and 1211.

A high pressure N2 line and sewer line are abandoned in place. A swale runs through site and a portion of Hot Spot 1. Proposed remediation depth is 50 ft BLS in Hot Spot 1 and 60 ft BLS in Hot Spot 2. Multiple low permeability layers were observed. Geotechnical results suggest air sparging is unlikely to move air through zones deeper than 45 ft BLS. The oxidant demand results were highly variable. Biotreatability study indicated that reductive dechlorination stalls at cDCE in sources zone (MW0002) which is likely due to Freon 113 inhibition of dechlorinating organisms. Bio pilot test conducted outside area of anticipated Freon inhibition was generally successful. The EZVI bench scale study indicated significant TCE reductions.

Propose evaluating aggressive technologies, less aggressive technologies, and a combination of aggressive and less aggressive technologies.

Team consensus reached that no engineering data gaps were identified.

Team consensus reached to prepare a remedial alternative evaluation with the following technologies:
1. LDA in TCE greater than 300 µg/L (present from 2015 Step 2 EE)
2. ERH in the TCE greater than 300 µg/L (present from 2015 Step 2 EE)
3. LDA in TCE greater than 3,000 µg/L (present from 2015 Step 2 EE)
4. ERH in TCE greater than 3,000 µg/L (present from 2015 Step 2 EE).
5. Air sparge in HCP associated with Hot Spot 1 and Hot Spot 1 above 45 ft BLS, potentially followed by ZVI in Hot Spots in TCE greater than 3,000 µg/L (below 45 ft BLS)
6. Air sparge in HCP above 45 ft BLS, potentially followed by ZVI in Hot Spot 1 TCE greater than 3,000 µg/L (below 45 ft BLS) with LDA in TCE greater than 11,000 µg/L in Hot Spot 2
7. Air sparge in HCP above 45 ft BLS, potentially followed by ZVI in Hot Spot 1 TCE greater than 3,000 µg/L (below 45 ft BLS) with ERH in TCE greater than 11,000 µg/L in Hot Spot 2

Goal:

Present the Site Characterization (Step 1) EE: Proposed Remedial Alternative Evaluation Technologies for Hot Spot 1, Hot Spot 2, and HCP. Obtain team consensus on areas and remedial technologies to be evaluated in the Remedial Alternatives Evaluation EE.

Decision:27	Team consensus reached that no engineering data gaps were identified.
Decision:28	Team consensus reached to prepare a remedial alternative evaluation with the following technologies: 1. LDA in TCE greater than 300 µg/L (present from 2015 Step 2 EE) 2. ERH in the TCE greater than 300 µg/L (present from 2015 Step 2 EE) 3. LDA in TCE greater than 3,000 µg/L (present from 2015 Step 2 EE) 4. ERH in TCE greater than 3,000 µg/L (present from 2015 Step 2 EE) 5. air sparge in HCP associated with Hot Spot 1 and Hot Spot 1 above 45 ft BLS, potentially followed by ZVI in Hot Spots in TCE greater than 3,000 µg/L (below 45 ft BLS) 6. air sparge in HCP above 45 ft BLS, potentially followed by ZVI in Hot Spot 1 TCE greater than 3,000 µg/L (below 45 ft BLS) with LDA in TCE greater than 11,000 µg/L in Hot Spot 2 7. air sparge in HCP above 45 ft BLS, potentially followed by ZVI in Hot Spot 1 TCE greater than 3,000 µg/L (below 45 ft BLS) with ERH in TCE greater than 11,000 µg/L in Hot Spot 2

HMFN (SWMU 090)

Discussion:

Site Characterization Summary and Pertinent Site Conditions:
• Building in Hot Spot 2 area was demolished in September 2014
• Utilities located on site
? High pressure Nitrogen (N2) line is present, but abandoned in place (Above ground portion has been removed)
? Sewer line is present, but abandoned in place
? Steam lines have been removed
• Swale runs through site and portion of Hot Spot 1
• 10 times NADC plume crosses asphalt roadway
• Proposed remediation depth is 50 ft BLS in Hot Spot 1 and 60 ft BLS in Hot Spot 2
• Multiple low permeability layers observed

Utility removal is not required for all options. Option 5 does not require utility removal. Partial utility removal is already accounted for in Option 6 and 7 cost estimates. Utility removal costs are included for all options requiring utility removal. The sentence on Page 3 of the HMF North Hot Spots 1 and 2 Description of Alternatives regarding the large diameter auger (LDA) contractor has been removed.

The corrective action objective (CAO) for active remediation is to reduce VOC concentrations within the treatment areas to concentrations that enable a transition to MNA.

Option 1 - LDA Mixing with Steam and zero-valent iron (ZVI) in Hot Spots 1 and 2 for TCE greater than 300 micrograms per liter (µg/L)
Site Preparation/Restoration
• Pre and post-treatment DPT groundwater sampling
• Abandonment and removal of monitoring wells in treatment area
• Removal of abandoned-in-place utilities and gravity sewer main
• Design/install electrical connection at site
• Installation of monitoring wells in treatment area for post-treatment monitoring
• Demolition and restoration of roadway within LDA treatment area
684 auger locations with 17.5 % overlap
• Revising the overlap to 13.5% reduces auger locations to 676 (costing did not consider reduction in number of augers).
• Will look at no overlap during implementation design based what was seen at Wilson Corners as well as a site in Kentucky.
Treatment implementation time estimated at approximately 11 months (6 days per week and 10 hour days).
A high degree of effectiveness is anticipated.
Cost estimated at $7.6 million with an approximate time to achieve the CAO of approximately 1 year.

Option 2 - electrical resistance heating (ERH) in Hot Spots 1 and 2 for TCE greater than 300 µg/L
Site Preparation/Restoration
• Pre and post-treatment DPT groundwater sampling
• Abandonment and removal of monitoring wells in treatment area
• Removal of abandoned-in-place utilities and gravity sewer main
• Design/install electrical connection at site
• Installation of monitoring wells in treatment area for post-treatment monitoring
• Demolition and restoration of roadway within ERH treatment area
The conceptual design layout consists of 109 electrodes and co-located vapor recovery wells (65 in Hot Spot 1 and 44 in Hot Spot 2 as well as 16 temperature monitoring points).
Total power consumption of approximately 9,444,000 kilowatt hours
Infiltration gallery approximately 1,160 ft2
Includes 15 days of “hot” DPT sampling
Treatment implementation time estimated at approximately 13 months.
Cost estimated at $7.2 million with an approximate time to achieve the CAO of approximately 1 year.

Option 3 - LDA Mixing with Steam and ZVI in Hot Spots 1 and 2 for TCE greater than 3,000 µg/L
462 auger locations with 17.5 % overlap
• Revising the overlap to 13.5% reduces auger locations to 445 (costing did not consider reduction in number of augers).
Treatment implementation time estimated at approximately 8 months (6 days per week and 10 hours per day).
A high degree of effectiveness is anticipated.
Cost estimated at $75.5 million with an approximate time to achieve the CAO of approximately less than 1 year.

Option 4 - ERH in Hot Spots 1 and 2 for TCE greater than 3,000 µg/L
Site Preparation/Restoration
• Pre and post-treatment DPT groundwater sampling

• Abandonment and removal of monitoring wells in treatment area
• Removal of abandoned-in-place utilities and gravity sewer main
• Design/install electrical connection at site
• Installation of monitoring wells in treatment area for post-treatment monitoring
• Demolition and restoration of roadway within ERH treatment area
The conceptual design layout consists of 77 electrodes and co-located vapor recovery wells (48 in Hot Spot 1 and 29 in Hot Spot 2 as well as 12 temperature monitoring points).
• Suggestion was made to orient the electrode layout such that a higher percentage of the TCE greater than 3,000 µg/L is covered by ERH treatment.
Total power consumption of approximately 6,534,000 kilowatt hours
Infiltration gallery approximately 800 ft2
Includes 10 days of "hot" DPT sampling
Treatment implementation time estimated at approximately 10 months.
Cost estimated at $5.6 million with an approximate time to achieve the CAO of approximately less than 1 year.

Option 5 - Air Sparging in Hot Spot 1 and Hot Spot 2 chlorinated volatile organic compound (CVOC) HCP with Potential EZVI Injection below 45 ft BLS
The maximum depth of air sparge wells is 45 ft BLS with well screens set above the low permeability layer.
Impacts that are greater than 45 ft BLS (if present post air sparge implementation) will be treated with EZVI.
• Post-treatment DPT groundwater sampling will be utilized to evaluate if EZVI injections are necessary (if there are CVOCs greater than NADC will inject).
Conceptual layout based upon:
20 ft radius of influence (ROI) in areas with CVOC impacts less than 30 ft BLS
10 ft ROI in area with CVOC impacts up to 45 ft BLS
Nested wells installed in the Hot Spot 1 source zone
Installation of 230 air sparge wells
• 10 wells to 27 ft BLS
• 11 wells to 32 ft BLS
• 215 wells to 45 ft BLS
Installation of 25 performance monitoring wells sampled semi-annually for VOCs.
Potential EZVI injection (one injection event costed) – design will be based on post treatment DPT sampling results
Cost range estimated from $4.7 to $5.2 million with an approximate time to achieve the CAO of approximately 5 to 7 years.
This option may require multiple EZVI injections and may be difficult to achieve significant CVOC mass reduction in Hot Spot 2 source zone (45 to 60 ft BLS).

Option 6 - Air Sparging in Hot Spot 1 and Hot Spot 2 CVOC HCP with Potential EZVI Injection below 45 ft BLS and LDA Mixing with Steam and ZVI in Hot Spot 2 where TCE is greater than 11,000 µg/L
This option has the same design parameters/assumptions for air sparge as used for Option 5.
Installation of 215 air sparge wells
• 10 wells to 27 ft BLS
• 11 wells to 32 ft BLS
• 194 wells to 45 ft BLS (including angle drilled wells under roadway_
Installation of 19 performance monitoring wells sampled semi-annually for VOCs.
LDA in Hot Spot 2
• Same design parameters/assumptions used as Option 1 and 3
• Implemented in area where TCE greater than 11,000 µg/L
• 127 LDA borings based on 13.5% overlap
• Steam only from 0 to 30 ft BLS
• ZVI/steam from 30 to 60 ft BLS
• Post implementation monitoring well installation (6 wells) – quarterly sampling for VOCs
Potential EZVI injection (one injection event costed) – design will be based on post treatment DPT sampling results.
Cost range estimated from $5.6 to $6.1 million with an approximate time to achieve the CAO of approximately 5 to 7 years.
This option aggressively treats the Hot Spot 2 source zone and may require multiple EZVI injections in Hot Spot 1 source zone.
In IMWP add costing for removal of piping and air sparge wells. Might need the removal of infrastructure to not limit the LDA footprint (allowing step out for LDA as needed).

Option 7 - Air Sparging in Hot Spot 1 and Hot Spot 2 CVOC HCP with Potential EZVI Injection below 45 ft BLS and ERH in Hot Spot 2 where TCE greater than 11,000 µg/L
Air sparge and EZVI design and layout is the same as Option 6.
ERH in Hot Spot 2
Same design parameters/assumptions used as Option 2 and 4
Implemented in area where TCE greater than 11,000 µg/L
25 sheet pile electrodes and co-located vapor recovery wells (installed to 62 ft BLS)
12 temperature monitoring points
Five day hot DPT sampling to evaluate effectiveness
Installation of 6 post implementation monitoring wells sampled quarterly for VOCs.
Cost range estimated from $6.5 to $7.0 million with an approximate time to achieve the CAO of approximately 5 to 7 years.
This option aggressively treats the Hot Spot 2 source zone and may require multiple EZVI injections in Hot Spot 1 source

zone.

Data Gaps
There is uncertainty around design implications of some utilities on site
• Electrical and telecom duct bank and water main (located at the toe of the TCE NADC and/or TCE 10 times NADC plume).
• Need to determine the depth and material of construction
• For LDA, could apply EZVI injections around utilities rather than soil mixing/heat
• For heating technologies:
? Heater electrodes spacing could be modified
? In area of utilities, temperatures could be lowered and system operated longer (depends on material and depth of utilities)
Uncertainty in what the residual mass for treatment from 45 to 60 ft BLS would be in Hot Spot 2 with EZVI post air sparge

Team consensus reached to implement air sparge for the CVOC NADC and LDA for Hot Spot 2 (Option 6).

Team has not agreed to the order of implementation. Some are not convinced to do air sparge first instead of LDA first in regards to Hot Spot 2 (as it is deeper). If you do air sparge first will clean up most the site quickly (in approx. 1 to 1½ years). Some team members felt that in Hot Spot 1 should do air sparge first and then EZVI, but in Hot Spot 2 LDA first then do the air sparge; this would mean that the air sparge remedy would be on hold for some period of time.

Goal:	
Present remedial alternative evaluation for Hot Spots 1 and 2 and HCP and obtain consensus on path forward.	
Decision:9	Team consensus reached to implement air sparge for the CVOC NADC and LDA for Hot Spot 2 (Option 6).

Meeting Minutes Summary Report

Meeting Start Date:	Meeting ID:	Minute ID:	Presenter:	PRL / SWMU:
10/18/2017	193	14	Daprato, Rebecca C.	HYPERGOL MODULE PROCESSING NORTH (SWMU 090)

Topic:

Hypergol Maintenance Facility North (SMWU 090)

Discussion:

The IM objective is to reduce CVOC concentrations within the IM Implementation Area to concentrations that facilitate a transition to LTM. The IM implementation area is the HCP, excluding the Hot Spot 2 source zone from 0 to 45 ft BLS, approximately 1.56 acres.

Ground penetrating radar (GPR) survey will be conducted pre-implementation and results will be included in the Implementation Work Plan (IWP) to allow for modifications of design. Monitoring well installation and baseline groundwater and air sampling will be conducted. 213 air sparge wells are proposed.

There are known site utilities that may require modified placement of air sparge well locations. GPR survey will help confirm utility locations.

The layout of the air sparge wells for each Hot Spot is based on the information provided below.
Hot Spot 1:
Air sparge wells within the vicinity of Hot Spot 1 source zone associated with CVOC 100 times NADC below 30 ft BLS is designed with a 10 ft radius of influence (ROI). Air sparge wells within the vicinity of Hot Spot 1 source zone associated with CVOC 100 times NADC above 30 ft BLS are designed with a 20 ft ROI. Air sparge wells within the remaining HCP associated with Hot Spot 1 have a 20 ft ROI.

Hot Spot 2:
Air sparge wells within the HCP that connected Hot Spot 1 and 2 as well as air sparge wells within the Hot Spot 2 HCP (Hot Spot 2 source zone omitted) are designed with a 10 ft ROI.

Soil cores will be collected at the bottom 10 ft of every air sparge borehole, except those with a screen interval of 25 to 27 ft BLS (this zone above known low permeability layers), to verify that the proposed well screen is not installed within low permeability layer and to mitigate issues associated with borehole wall compaction.

Air sparge piping layout will be installed so the system can operate with five zones and the piping will be HDPE. Manifolds will be utilize to distribute air from the system to the individual air sparge wells. The current design assumes the use of NASA-KSC air sparge trailer No. 7.

The performance monitoring well network consists of 21 proposed and 6 existing monitoring well locations. For performance monitoring a total of 27 wells will be sampled for CVOCs at the following intervals baseline, quarterly (year 1), and semiannually (post year 1).

Air quality monitoring of the IM Implementation area will be performed during first month of operation, which will include: (i) PID screening in breathing zone during O&Ms; and (ii) baseline and weekly (4 weeks) air samples at each Hot Spot.

Total implementation cost with 5 to 7 years of OM&M is approximately $2.2 to $2.5 million. Optional cost to procure an air sparge trailer (100 hp, 530 scfm at 102 psi) is approximately $240,000.

Team consensus reached on air sparge IMWP.

Goal:

Present Air Sparge Interim Measures Work Plan.

Decision:22	Team consensus reached on air sparge IMWP.

Meeting Minutes Report

May 2018 Team Meeting

Meeting Date From: 5/10/2018 To: 5/10/2018

Meeting ID: 1805

Location Description: Kennedy Space Center-FL

Meeting Type: Full Partnering Team Meeting

Meeting Topic:	**Hypergol Maintenance Facility North (SWMU 090)**		
Minute: 1805-M6	**Site:**	**Goal:**	**Discussion:**
Presenter: Daprato, Rebecca C.	HYPERGOL MODULE PROCESSING NORTH (SWMU 090)	Obtain team consensus on interim groundwater monitoring (IGM) for 2019.	Based on the results of the 2018 IGM, the sampling results are generally consistent with historic results, which suggest that the plumes are not migrating vertically or horizontally (i.e., stable conditions). Geosyntec recommends continuing IGM until the remedy is implemented. The proposed plan for the 2019 IGM is presented in Table 5 and on Figure 10, provided to the team. The only modification made to the sampling plan is the recommendation to remove the analysis of 1,4-dioxane from the samples collected from monitoring well MW0015, since the concentrations for the last two consecutive events have been below the GCTL. Team consensus reached on IGM scheduled for January 2019 (pending the implementation of the air sparge IM) as follows: CVOC and Freon 113 analysis from monitoring wells MW0001, MW0004, MW0005, MW0008, MW0011, MW0012, MW0015, MW0016, MW0022, MW0002, MW0006, MW0010, MW0013, MW0019, PZ0010, MW0003, MW0024, MW0025, and MW0026 and 1,4-dioxane analysis from monitoring wells MW0008, MW0011 and MW0006. In addition, water levels will be collected from accessible site monitoring wells. New advisory numbers are out for 1,4-dioxane; is one tenth of the current GCTL.
Decision:19	Team consensus reached on IGM scheduled for January 2019 (pending the implementation of the air sparge IM) as follows: CVOC and Freon 113 analysis from monitoring wells MW0001, MW0004, MW0005, MW0008, MW0011, MW0012, MW0015, MW0016, MW0022, MW0002, MW0006, MW0010, MW0013, MW0019, PZ0010, MW0003, MW0024, MW0025, and MW0026 and 1,4-dioxane analysis from monitoring wells MW0008, MW0011 and MW0006. In addition, water levels will be collected from accessible site monitoring wells.		

Meeting Topic:	**Radar Wind Profiler Site D (PRL 194)**		
Minute: 1805-M7	**Site:**	**Goal:**	**Discussion:**
Presenter: Lloyd, James	RADAR WIND PROFILER SITE D (PRL 194)	Present confirmation sampling results and obtain team consensus on path forward.	The Solid Waste Management Unit Assessment conducted in 2010 identified 5 locations of concern (LOCs). LOC 1 Electrical Transformer Bank JB-2 – four soil samples collected from 0 to 0.5 ft BLS and analyzed for PCBs and TRPH. All results were non-detect for PCBs. Two soil

2102-M12 Chris Hook /Tetra Tech

Hypergol Maintenance Facility North (SWMU #090), Interim Measure Construction Completion Report, February 2021

Goal: The purpose of the ADP is to primarily focus on an overview of the pre-construction baseline direct-push technology (DPT) sampling event, interim measure (IM) installation activities, IM commissioning and start-up, and initial operations, maintenance, and monitoring (OM&M).

Discussion: The footprint of the air sparge (AS) IM includes the High Concentration Plume (HCP), which is defined by chlorinated volatile organic compound (CVOC) concentrations exceeding State of Florida Natural Attenuation Default Concentrations (NADC), with the exception of Hot Spot 2. Hot Spot 2 is intended to be managed by a potential follow-on IM upon completion of the HCP AS IM. The current IM objective is to reduce VOC concentrations in the groundwater treatment zone to below NADCs to facilitate transition of the site into MNA through LTM. General background and history of the site was included within the ADP and described further in historical site documents.

FDEP requested clarification on whether or not the pilot test mentioned in the ADP was conducted at the site. Tetra Tech stated that the emulsified zero valent iron pilot test was not implemented at the site. NASA added that Freon was an inhibitor and decided against that treatment option.

In October 2019, a baseline direct push technology sampling event was completed. Results led to minor adjustments in the IM treatment footprint, which yielded an expansion from 213 AS well (ASWs) to 228 ASWs. Discussion of the modified ASW array was presented to the Team.

In November 2019 through January 2020, premobilization activities, such as planning documents, utility location, procurement, and permitting were completed. In December 2020 through January 2021, air sparge well installation took place; January through July 2021: Piping and infrastructure installation, with temporary suspense due to COVID-19 precautions; June 2021: Baseline monitoring at groundwater monitoring wells and pre-IM ambient air sampling; July 2021: Electrical installation; August 2021: AS

system delivery, installation, commissioning, and start-up; October 2021: Q1 performance monitoring sampling (results included within ADP); and from August 2021 to present: OM&M of the site.

The recommended path forward is to continue OM&M of the air sparge IM, which includes: Year 1 quarterly performance monitoring, routine preventative maintenance and inspections, operational data recording, and ambient air monitoring. The path forward also includes assessing Q2 performance monitoring results and optimization operations such as pulse duration, pulse frequency, and air sparge zone air flow rate and pressure. The Year 1 OM&M report will be provided upon completion.

FDEP inquired if this was just the AS portion of the remediation, to which Tetra Tech confirmed it was. FDEP observed that this briefing was more detailed than the ADP provided, and requested a copy. Tetra Tech stated they would provide after the meeting. FDEP also noted that in the future they would like to see groundwater monitoring on the entirety of the plume; more of a total delineation of horizontal and vertical plume to include the low concentration plume. How long will this system run? NASA responded with a minimum of four years of run time. The design of the IM for treatment of deep CVOCs will be refined with performance monitoring data from the AS IM, so maybe six years total.

2102-M13 Chris Marshall /AECOM

Industrial Area LTM, February 2021

Goal: The purpose of the ADP is to present activities and data associated with 15 Industrial Area (IA) long-term monitoring (LTM) sites: Communication, Maintenance, and Storage (CMS) Facility (SWMU 082), Fuel Storage Area #1 (FSA1) Building 1044 Underground Storage Tank (UST) (Potential Release Location [PRL] 157), Launch Equipment Test Facility (LETF) (SWMU 091), Orsino Storage Yard (ORSY) (SWMU 004), Citgo Service Station (CGO) (PRL 129), Ransom Road Landfill (RRLF) (SWMU 003), Vertical Processing Facility (VPF) (SWMU 077), Environmental Health Facility (EHF) (SWMU 079), Space Station Processing Facility (SSPF) (SWMU 098), Operations and Checkout Building (O&C) (SWMU 076), Engineering Development Laboratory (EDL) (SWMU 085), Building M7-0505 Treatment Tank Area (M7-505)

Corners) might have a planned small dig and installation of air sparge wells listed as presumptive remedies. FDEP is not receptive to a blanket statement of air sparging, soil digs, etc., at all sites listed on the permit.

NASA stated that prior to the 2012 RCRA permit update, the application contained listings and maps associated with all the sites listed. NASA would be happy to incorporate presumptive remedies into the permit. This approach would put the remedies into a relatively certain timeframe since permits are renewed every 5 years.

2201-M03 Chris Hook/Tetra Tech

Hypergol Maintenance Facility North(HMFN) (SWMU #090) Performance Monitoring Report, January 2022

Goal: The objective is to provide a brief background of site conditions and the baseline and Year 1 quarterly performance groundwater results at HMFN. System startup and operations, quarterly synoptic groundwater survey results, data evaluation and a path forward were presented.

Discussion:

The IM objectives were to reduce volatile organic compounds (VOC) concentrations within the high concentration plume (HCP) to concentrations that facilitate transition of the site into monitored natural attenuation (MNA) through long-term monitoring; follow completion of or at a later point during the air sparge (AS) interim measure (IM), reassess the hot spot 2 (HS2) source zone (SZ) and implement the next phase of remediation; and overall reduce concentrations of VOCs present in groundwater to levels below their respective State of Florida groundwater cleanup target levels (GCTLs). The treatment zone covers approximately 1.62 acres with an east-west orientation. AS wells were installed to total depths ranging from 25 to 45 feet below land surface (bls), based on design criteria and real-time geologic interpretation.

During Year 1 of system operations (August 2020 to August 2021) the HMFN air sparge system air flow rates consistently met the design flow rates and pressures. The system runtime was 83%, with longest downtimes associated with groundwater sampling events. Following baseline sampling in June 2020, performance monitoring

sampling was conducted in October 2020, January 2021, April 2021, and July 2021.

In the shallow zone (5-20ft bls), the shallow plume is bending toward the southeast, with isolated vinyl chloride (VC) exceedances adjacent to the borrow lake, oscillating between natural attenuation default concentrations (NADC) and GCTL at MW0037 during Year 1, with GCTL exceedances in July 2021. Ten times NADC (10XNADC) VC results in the source zone decreased to levels near the GCTL by July 2021. By the end of Year 1, cis-1,2-dichloroethene (cDCE) results were above GCTL at MW0009 only (from >NADC during baseline to <NADC in July 2021). No trans-1,2-dichloroethene (tDCE) GCTL exceedances were detected Trichloroethene (TCE) results were below its NADC in July 2021, with three wells above GCTLs. Freon-113 was detected in various wells in concentrations below its GCTL, with highest results near the western source zone.

The intermediate plume (20-40ft bls) extends east of G Avenue SE with isolated VCs adjacent to borrow lake. There were eight wells where TCE, cDCE and/or VC exceeded 10xNADC at baseline. July 2021 results showed decreased western and southeastern extent of VC since baseline, with two areas of 10xNADC exceedances remaining (TCE to the west and VC to the east). There were no tDCE exceedances detected in the intermediate groundwater plume and Freon-113 was detected near source zones.

The highest VOC concentrations were found in deep zone (> 40 ft bls). The deep groundwater plume shows a decreased areal extent of plume since baseline, but TCE, cDCE, and VC exceedances remain above 10x NADC. tDCE was undetected, but that may be the result of high laboratory dilution factors. Freon-113 is detected near source zones. The deep zone performance monitoring wells include three wells that are screened in the deep source zone below the air sparge wells; MW0024, MW0028 and MW0033. VOCs were undetected at MW0024, screened from 55-65 feet bls (below clayey layer), with nearby wells screened 45-50 feet bls (MW0028 and MW0033) exceeding 100xNADC for TCE. TCE flux from the deeper zone into the treatment zone is evident at well pair MW0027 (40-45 feet bls) and MW0028 (45-50 feet bls).

In conclusion, the AS system is operating as designed and effective in achieving the IM objective of reducing VOC concentrations within the HCP. A future direct push technology (DPT) groundwater sampling investigation will be conducted to assess system progress

and provide a snapshot of current site conditions. The results will be presented to KSCRT at a future meeting to discuss further actions. Large diameter auger (LDA) soil mixing with steam is also planned for the deeper zone at HS2 and will be presented to KSCRT at a future meeting.

The recommended path forward includes assessing the Year 2 performance monitoring results and optimizing operations such as pulse duration and frequency and AS zone air flow rate and pressure, and preparing the Year 2 Performance Monitoring Report (PMR) and submitting to FDEP/NASA. The same performance monitoring well network was recommended for Year 2 except for dropping MW0035 and MW0036. The IM Work Plan called for sampling frequency to change from quarterly to semi-annually in Year 2. Semi-annual sampling was recommended for the performance monitoring wells, except that annual sampling was proposed for MW0046 and MW0047.

FDEP inquired on the rationale behind dropping two monitoring wells and the altered sampling frequency for two of the monitoring wells?

Tetra Tech stated that MW0035 had cDCE and VC results above NADC prior to start of air sparging. By the third quarter of performance monitoring, all COC results were reduced to less than GCTL and remained consistent in the 4th quarter of monitoring. MW0036 had GCTL exceedances of VC only before sparge system startup, and all results have been at or below the GCTL for the last three performance monitoring events. The wells are consistently below GCTLs for a few quarters and Tetra Tech didn't believe the data from these two wells is useful at this point.

Tetra Tech pointed out the isolated VC detection at MW0037 to the east of the MW0046/MW0047 well pair. MW0046 and MW0047 are between the plume treatment area and the isolated VC plume at MW0037/MW0038 in an area that is currently below GCTLs. A groundwater flow direction reversal is sometimes observed where flow is away from the borrow pond instead of toward it. Tetra Tech believes the reduced frequency will be adequate to keep an eye on contaminant migration toward or away from the borrow pond.

Tetra Tech will emphasize in the report the reasoning for the frequency reductions in these wells and for removing MW0035 and MW0036 from performance monitoring, and provide sufficient discussion about those decisions and how they were made.

FDEP inquired if the easterly flow was attributed to the borrow pit, and if it was truly a borrow pit. NASA confirmed it was a borrow pit in the exact form of a rectangle.

FDEP inquired if NASA had previously performed grain size analysis to evaluate if AS would be effective at deeper depths at KSC? NASA observed that lithologic observations at HMFN had been the reason to sparge above the lower permeability unit, but that the Launch Complex (LC) 34 pilot test is all about testing the theory of sparging in lower permeability zones.

At present, NASA is seeking more aggressive technology (LDA with zinc) to knock out the vestiges of this source zone after the AS IM. They have a Remediation Alternatives Evaluation (RAE) completed for this site, but not a work plan for an IM yet. Post AS, NASA will reassess what HS2 looks like at the deep interval (hopefully smaller) and will try to eviscerate the remaining plume at this location in one way or the other.

The Team reached consensus to continue operation, maintenance and monitoring (OM&M) of the AS IM, which includes: maintenance and operation of the AS system; discontinuation of the AS system operation at Zone 1 comprising 17 ASWs screened from 25-27 feet bls in the western portion of the AS network; removal of monitoring wells MW0035 and MW0036 from performance sampling (based on two consecutive rounds of sampling results below GCTLs); reduction in the performance sampling schedule frequency of MW0046 and MW0047 to annually (based on the two consecutive rounds of sampling results below GCTLs), continuing this annual sampling to monitor the observed groundwater flow direction reversal away from the borrow lake toward these two wells; sampling remaining wells semi-annually in accordance with October 2017 Interim Measure Work Plan (IMWP); and the completion of one annual round of ambient air sampling. Monitoring wells and their respective groundwater monitoring schedule for Year 2 is provided on Slide 63 of the ADP **(2201-D01).** These include monitoring wells MW0002, MW0004, MW0008, MW0009, MW0011, MW0016, MW0024, MW0027, MW0028, MW0029, MW0030, MW0031, MW0032, MW0033, MW0034, MW0037, MW0038, MW0039, MW0040, MW0041, MW0042, MW0043, MW0044, MW0045, MW0046, and MW0047.
